ABSTRACTED-PUB-NO: JP06350784A

BASIC-ABSTRACT: The apparatus functions as a server in LAN configuration where there is at least one terminal connected. A personal computer (PC1, PC2..lonCm) notifies the server of its intention to transmit a file. The file is received and saved in a reception file. The file is then scanned for the presence of any virus. If a virus is detected during inspection, the file is erased and the user is intimated. The apparatus is located at a nodal point for file transfers within and outside the LAN. ADVANTAGE - Controls spread of virus effectively.

IPC: H04L029/06

ABSTRACTED-PUB-NO: EP 666671A BASIC-ABSTRACT: The apparatus includes a transmitter (1) and a receiver (2). Each includes a processor (10,20) with a hard disk (12,22) and a communications interface (15,25). The interfaces communicate across the digital access network (RN) with both parts containing communications modules with a predetermined protocol for transfer to disk. The receiver has a temporary memory store (26) which is used to communicate with the processor. An anti-virus module (220) within the temporary store contains information on viruses, for comparison with the incoming data and extraction of the uncontaminated data. ADVANTAGE-Removes computer viruses before

reception, preventing infection of computer. Anti-virus module can be updated for new viruses.
